Multi-Step Equations - Decimals

Solve the multi-step equations and round the answers to two decimal places.

$0.8x + 3.2 - 4.3x = 7.7 - 1.2x$	$\dfrac{3.5x + 3}{2.4x + 2} = 0.2$
$2.6(x - 0.8) = 9.3 - x$	$\dfrac{x - 3.9}{2.2} = 1.2 - x$
$3.12 + 8.4x + 9.33 = 6.2x - 4.2$	$\dfrac{x - 11.2}{x + 7.6} = 2.4$
