

Solve the multi-step equations.

$4x + 7 - 6x = 5 - 4x + 4$	$\frac{x}{2} + \frac{x}{3} = 5$
$\frac{3x - 1}{3x + 2} = 4$	$3(5x - 2) + 4x = 9x + 6 - 2x$
$\frac{5x + 6}{4} = 3x - 2$	$5(2x + 3) = 3(4x + 1) - 2(3x + 2)$
