

## Simplifying Proper Fractions

Reduce each proper fraction to its lowest terms.

$\frac{128}{144} = \square$	$\frac{168}{364} = \square$
$\frac{96}{128} = \square$	$\frac{275}{425} = \square$
$\frac{144}{324} = \square$	$\frac{240}{576} = \square$
$\frac{224}{308} = \square$	$\frac{495}{770} = \square$
$\frac{192}{448} = \square$	$\frac{528}{720} = \square$
$\frac{504}{546} = \square$	$\frac{672}{816} = \square$
$\frac{224}{504} = \square$	$\frac{175}{375} = \square$
$\frac{420}{750} = \square$	$\frac{384}{408} = \square$
