

Subtracting Mixed Numbers and Whole Numbers

$$5\frac{3}{4} - \square = 3\frac{3}{4}$$

$$4\frac{1}{2} - \square = 2\frac{1}{2}$$

$$6\frac{2}{5} - \square = 1\frac{2}{5}$$

$$10\frac{2}{3} - \square = 3\frac{2}{3}$$

$$8\frac{5}{9} - \square = 6\frac{5}{9}$$

$$7\frac{8}{9} - \square = 4\frac{8}{9}$$

$$13\frac{4}{7} - \square = 9\frac{4}{7}$$

$$3\frac{3}{5} - \square = 3\frac{3}{5}$$

$$2\frac{5}{8} - \square = 1\frac{5}{8}$$

$$15\frac{1}{4} - \square = 10\frac{1}{4}$$

$$8\frac{2}{11} - \square = 5\frac{2}{11}$$

$$9\frac{6}{7} - \square = 2\frac{6}{7}$$

$$4\frac{8}{15} - \square = 2\frac{8}{15}$$

$$7\frac{1}{12} - \square = 3\frac{1}{12}$$

$$14\frac{5}{9} - \square = 8\frac{5}{9}$$

$$2\frac{1}{6} - \square = 1\frac{1}{6}$$

$$6\frac{4}{11} - \square = 3\frac{4}{11}$$

$$5\frac{8}{13} - \square = 3\frac{8}{13}$$

$$5\frac{3}{4} - \square = 1\frac{3}{4}$$

$$8\frac{1}{8} - \square = 4\frac{1}{8}$$
